HONR 111.041: Entrepreneurship

Lauren Hill • MW - 10:00 a.m. •

This first-year experience course for Honors College students examines the process for developing research questions and exploring the opportunities available to Honors College students for conducting undergraduate research. Course sections are centered on a theme so that students can focus their studies on a common topic. Students explore university library resources, participate in community engagement projects and present their research in a conference-style setting.

Meets General Education IA

HONR 111.042: Writing about Health Care

Lauren Hill • TH - 10:00 a.m. •

HONR 112.041: American Democracy and the World

Lauren Hill • TH - 10:00 a.m. •

The course examines the interplay of American democracy and values with the evolving Western system of world order. The course describes how the nations of Western Europe sought to establish and maintain a system of international order beginning in the late medieval period through the development of the concept of the sovereign nation state, relations among those states in the 17th and 18th centuries, and the consequences of the American Revolution for the international system.

HONR 311.041/HIST 215.01H:

HONR 311.045: The History of Nursing

William A. Papp • MW 10:00-11:00

The course examines the history, trends, eras, compromises, accomplishments, and challenges of the profession of nursing in America during the last 150 years. It also highlights the historical events and their effects on the profession.

HONR 496.042: thesis consultation

taia • p

This series of workshops is designed to aid students during the semester in which they are finishing their thesis research. Students are required to attend all sessions and submit their Honors Thesis to the Honors College for fulfillment of their Honors requirements.

INFO 333.151: printing, digital Enablement

Eugene Hahn • MW • H

This is the class where you create the future. Every day entrepreneurs are turning creativity and know-how into profit on platforms like Kickstarter and Indiegogo. Successful technological developments including 3D printing and the Internet of Things are expected to greatly change businesses and society in the coming years. In this student-visioned class, you design and produce your own electronics product using 3D printing and the Arduino microcontroller platform. You introduce your functioning product to the University community by way of presentations. The class assumes no prior knowledge with either technology.

CHEM 121.11H

Introduction to Chemistry

This course presents the fundamentals of chemistry through the lens of important societal issues. The essentials of atomic structure, chemical reactions, and chemical bonding are covered.

IDIS 280.01H: Leadership Studies
Prerequisites: Management 101 or Psychology 101

IDIS 280.02H: Leadership Studies
Prerequisites: Management 101 or Psychology 101

While early studies suggested that leadership was limited to a set of innate traits inherited by a person at birth, more recent scholars have concluded that the core characteristics of leadership could indeed be learned and even improved upon through conscious reflection and practice. This class takes a broad approach to leadership studies by focusing on scientific studies of both leaders and followers. We will attempt to define observable and repeatable characteristics of leadership and discuss their practice in real settings. This is a course for students who are interested in leadership and want to learn more about it.

the 1990s, the number of people in the UK who are aged 65 and over has increased from 10.5 million to 13.5 million (19.5% of the population).

There is a growing awareness of the need to address the needs of older people, and the Government has set out a strategy for the 21st century in the White Paper on *Ageing Better: Our Future* (Department of Health, 1999). This paper sets out the Government's strategy for the 21st century, and the Department of Health's role in this strategy.

The White Paper sets out a number of key objectives for the Department of Health, and the following are some of the key objectives that are relevant to the needs of older people:

- To improve the health and well-being of older people.
- To ensure that older people have access to the services they need.
- To ensure that older people are able to live independently.
- To ensure that older people are able to participate in society.

The Department of Health is committed to achieving these objectives, and the following are some of the key actions that the Department is taking to achieve these objectives:

- Improving the health and well-being of older people: The Department is investing in research and development to improve the health and well-being of older people. This includes funding research into the causes of age-related diseases, and into ways of preventing and treating these diseases.
- Ensuring that older people have access to the services they need: The Department is investing in the development of services that meet the needs of older people. This includes funding the development of home care services, and of services that support older people to live independently.

- Ensuring that older people are able to live independently: The Department is investing in the development of services that support older people to live independently. This includes funding the development of services that provide support and advice to older people.

- Ensuring that older people are able to participate in society: The Department is investing in the development of services that support older people to participate in society. This includes funding the development of services that provide opportunities for older people to engage in social activities.

The Department of Health is committed to achieving these objectives, and the following are some of the key actions that the Department is taking to achieve these objectives:
