

Doing More with Less

In this year's Higher Education
Special Report, the Department of Legislative
Services of the General Assembly

This chart illustrates that while Salisbury University receives less funding per student as compared to the USM universities for which we compete for

Meeting Workforce Demands

In addition to providing students with a rock solid liberal arts foundation, we at SU also take very seriously our obligation to create a Maryland workforce ready to compete and succeed in the 21st century economy. In the interest of brevity, I will just point out three of our accomplishments this year in this context.

Nursing

Salisbury University's Nursing Department continues to take strides in meeting the critical need Maryland has in healthcare. SU's Nursing Department has been awarded \$635,601 from the Maryland Higher Education Commission (MHEC) to establish clinical educator partnerships with Peninsula Regional Medical Center in Salisbury and Atlantic General Hospital in Berlin. The grant creates three hospital-based clinical faculty positions to ensure nurses are able to keep moving forward in needed career pathways. This partnership benefits hospitals by allowing them to retain experienced staff and offer them opportunities to continue their education. It also lets SU increase its pool of available clinical educators and, in turn, expand its programs, particularly for second-degree students.

The MHEC grant is not the first for the Nursing Department. Earlier this summer, SU received \$80,000 from the Robert Wood Johnson Foundation for scholarships for second-degree nursing students. In addition, the University recently received a \$932,175 grant from the Maryland Hospital Association for nurse education. The three-year grant will allow SU to develop a high-fidelity simulation center focused on maternal, newborn, and pediatric care; train student actors to be patients with psychiatric/mental health disorders; and create a best practices course.

GIS/BEACON: Broadband Mapping

We know that many parts of our State do not have reliable broadband access, and this deficiency cripples the ability of these communities to compete in the 21st century economy. What we do not know, surprisingly, is where in Maryland there is good broadband access and where there is not. Such a glaring blind spot makes it impossible to effectively and efficiently address this

debilitating problem. Senator Mikulski summed up the importance of this effort when she said: "Fortt Q ry@noo, in
